Helping you see the big picture™

iPlanTables

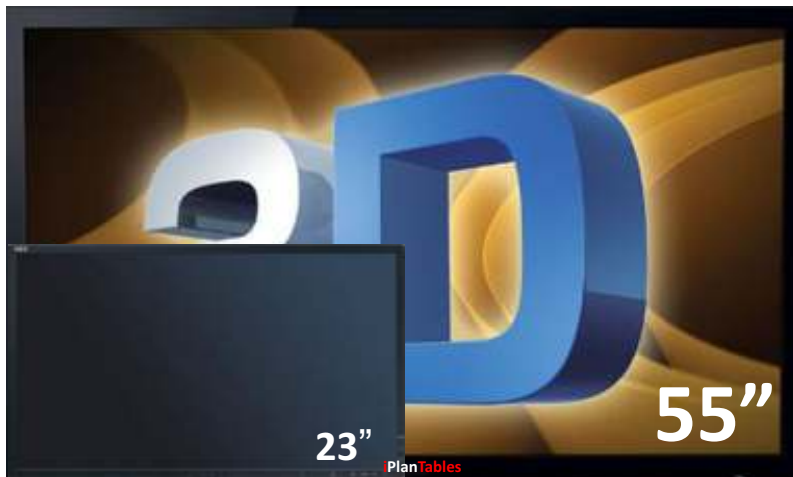

Helping you see the big picture™

Thank you for taking your time to research iPlanTables. In today's design and construction market the use of electronic data is the normal means of communicating critical project information.

But there is a big problem - - actually a small one!

Design and construction professionals working with this information are confronted with 17"- 23" monitors to look at the information. The "newest" trick is to use multiple monitors which help, but is a far cry from a solution.

See the "big picture" difference between your current 23" monitor and an iPlanTables solution:

According to University of Utah researchers, using a larger monitor could save you 2.5 hours per day.

- Plan Pages
- BIM Files
- Photos
- Renderings
- Video
- Specifications
- Spreadsheets
- Project Schedules

The time studies associated with monitor usage are fascinating. There is a complete realm of science that deals with lost/wasted motion, repetitive actions and the amount of time spent panning, zooming and clicking on a daily basis.

The numbers are enormous. In the design and construction industry, MOST of the day is spent on a computer. iPlanTables fills a gigantic void in the viewing of project information.

iPlanTables solutions are configured to how you prefer to look at information, not the other way around. In virtually every scenario, iPlanTables provides thousands of dollars back to managing a project not managing the information.

Project Manager™ Series

The truth is iPlanTables replaces the need to order paper prints.

iPlanTables Project Viewing Stations embrace the need to continue to make our projects greener.

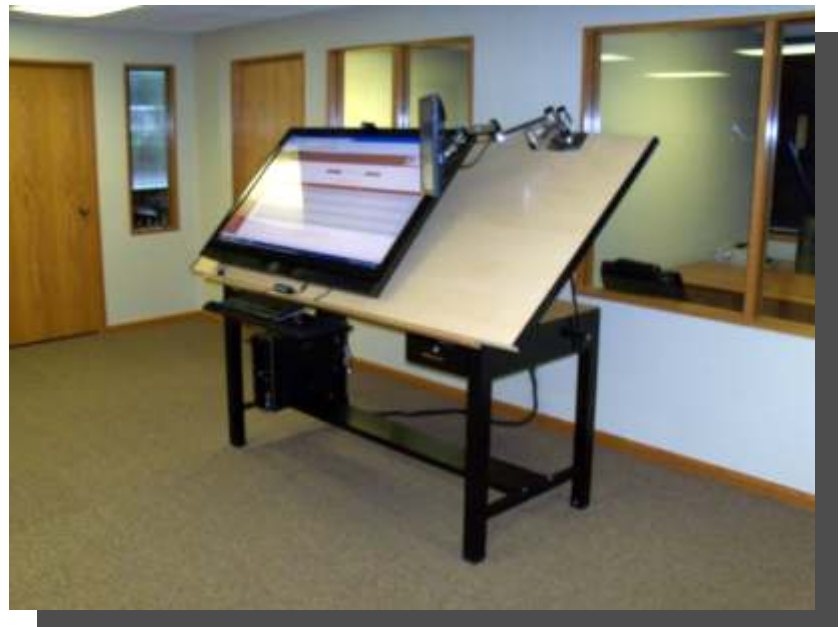

How much time do you spend a day looking at your computer screen?

60% of that time is spent on unnecessary panning, zooming and tabbing your way across the images

Spend your time managing the project, not the images

- Estimators

- Facilities Management
- Collaboration Station™
- Software Training
- Online Conferencing

Free up Floor Space

2,000,000 drawings = 5,000 rolling stands!
40,000 square feet of space

2,000,000 drawings=
32 square feet of space

iPlanTables - Collaboration Station™ Series

Smiling Really? No more huddling around someone's screen
(You can tell the smiles are not real-the screen is empty!)

The average computer screen only displays 80% of the actual screen
The rest are tool bars, project panes and scroll bars!

Return On Investment

Return On Investment (ROI) is a business measurement based upon the amount of money invested versus the productivity gained.

iPlanTables is an obvious choice based upon its ability to eliminate paper (GREEN), dramatically improve project communication and collaboration, and for the ultimate benefit delivered: **a tremendous ROI.**

A practical, powerful solution has been missing in the design, construction and facilities industries' ability to view, collaborate, change and share their critical information. iPlanTables solves the problem!

- Eliminates Paper
- Facilities Management
- Increases Productivity
- Increases Floor Space
- Reduces Eye Strain
- Collaboration Station™
- Project Information Command Center
- Reduces Training Time

Productivity

Microsoft

LOCKHEED MARTIN

The researchers took 15 volunteers, sat each one in front of a regular-size 20-inch monitor and had them complete a variety of tasks designed to challenge their powers of concentration, - including a Web search, some cutting and pasting and memorizing a seven-digit phone number.

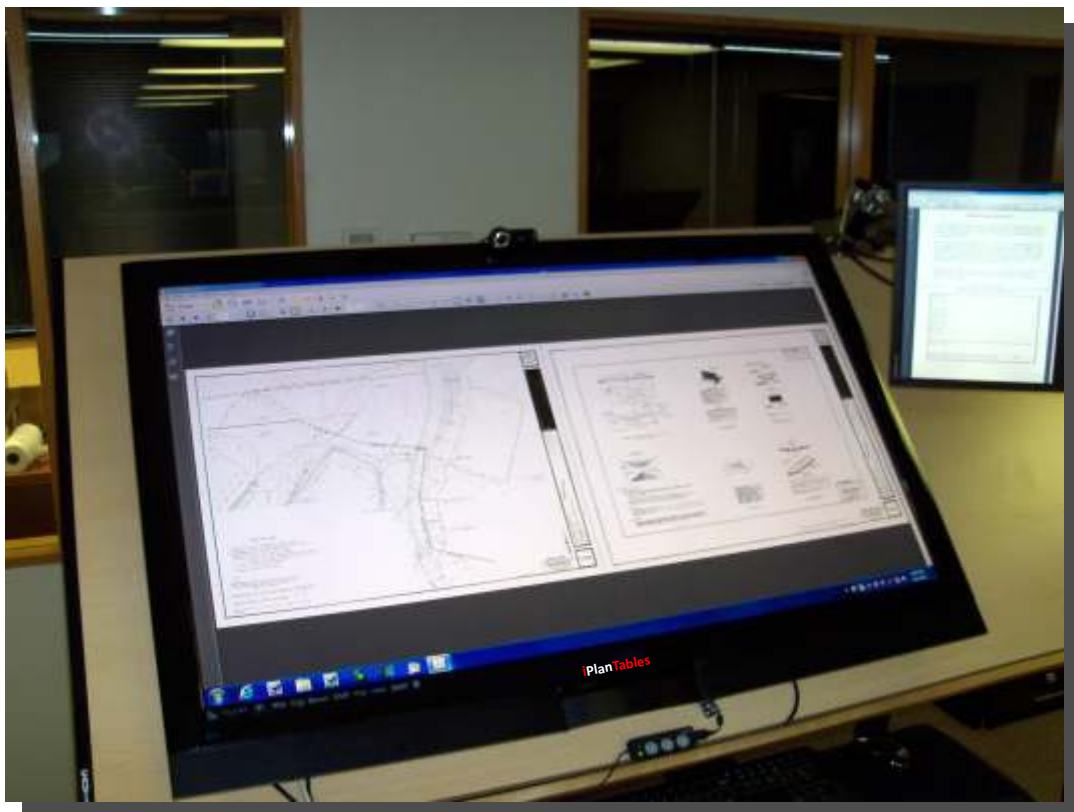

Then the volunteers repeated these same tasks, this time using a computer with a massive 42-inch screen, as big as a plasma TV.

The results? On the bigger screen, people completed the tasks at least 10 percent more quickly - and some as much as 44 percent more quickly.

They were also more likely to remember the seven-digit number, which showed that the multitasking was clearly less taxing on their brains. Some of the volunteers were so enthralled with the huge screen that they begged to take it home.

In two decades of research, Microsoft Researchers had never seen a single tweak to a computer system so significantly improve a user's productivity. The clearer your screen, they found, the calmer your mind.

-Source NY Times

Changing from a 42" monitor to a 55" and adding the document monitor as well only increases your productivity exponentially

Facilities Manager™ Series

As a design and construction project ends, boxes and boxes of critical project and equipment information are turned over to the owner. iPlanTables provides a complete

resource to maintain this critical information. iPlanTables provides your facilities department with a walk-up, easy-to-view **Building Information Viewing Station**.

From Pre-Construction to Facilities Management, iPlanTables provides a professional, productive and powerful solution for all project team members.

With IPT's **Remote File Management Services (RFMS)** we can keep your critical information up to date.

Long after a building is built the facilities group is left with piles of paper. iPlanTables provides an archival retention and viewing solution. Using our exclusive Remote File Management service, all of the clients information can be stored, updated and retrieved from one location or a thousand!

Construction drawings, O&M manuals, photographs, walk-thru videos, BIM interactive images, animations -- all viewed in a full size viewing solution.

iPlanTables **works for your IT team** to design the proper solutions to our common problem "Where's My Stuff?"
